Annual GTC Environmental Report

Since our last AGM the council members have not held any physical council meetings. However there have been emissions from recces for our 50th anniversary celebration which need collecting along with other meetings, exhibitions and awards. These will need collecting before the new council begins its term after the AGM.

In January 2022 we offset 1 tonne of emissions, with Albert's Creative Offset's scheme, to account for the council's approximate footprint of 127.93 kg of Co2 in 2021. I expect this figure to be much higher in 2022 as we will be able to hold physical workshops and meetings. We have also attended more exhibitions in 2022 than 2021.
