

GTC WORKSHOPS

Back in June the GTC 'co-produced' a workshop with the Society of Television Lighting and Design and the EBU to enable Alan Roberts to present his work on the TLCI - the Television Lighting Consistency Index.

Kindly hosted by SKY at Studio H at Isleworth, with generous participation from major luminaire manufacturers, the event also included presentations from DoP Jonathan Harrison on LED versus tungsten and fluorescent sources and Robert Yeo of Pro-Lite Technology on spectroradiometry.

SKY Lighting Director Iain Davidson chaired the day giving an overview of the practical pros and cons of LED lighting and how he carefully moved SKY's studio lighting across to predominantly LED sources.

Alan's TLCI paper was produced in full in the Autumn 2013 issue of Zerb. Here though are a selection of Max Hodgett's excellent pictures of the 'LED Lighting - Setting the Standard' workshop.....
