## **New Ultra-Compact PAGlink Charger**

PAG is now shipping its new, ultra-compact battery charger designed to fit any kit bag and suit any budget.

The PAGlink Micro Charger is ideal when you want to travel light and need to charge PAGlink or standard V-Mount Li-Ion batteries.

The charger clips over the battery contacts and is connected to a plug-in power supply unit that accepts a 100-240V AC input, and interchangeable plug adaptors, for use worldwide.

PAGlink is the first camera battery system that allows more than two batteries to be linked for charge or discharge. Using the Micro Charger, two fully discharged PAGlink batteries will be fully charged in approximately 8 hours. If you need power in a hurry, one fully discharged battery will be 80% charged in approximately 3 hours. The charge status of each battery is shown on its individual display.

The Micro Charger is smaller than a PAGlink battery and weighs approximately 200g, making it ideal for transportation in any kit bag.

The unit features LED indication of charging, charge completion, a faulty battery, and battery absent.

Packages that include a Micro Charger and two PAGlink batteries are available at a reduced price.

PAG is one of the broadcast industry's longest established providers of innovative and high-quality camera power and lighting systems.
