PAG Enhances Broadcast Battery

The new PAG L96e Li-Ion battery is an enhanced version of the company's popular L95e, and a replacement for it.

The L96e offers a superior performance for the same price as the L95e. It provides a maximum continuous output of 8A, compared to the L95e's 7A, and performs better at low temperatures.

The V-Mount model is compatible with multiple viewfinder data systems for displaying capacity in the viewfinder, such as those used by Sony and Red One cameras. It adjusts automatically to each system. In addition, the L96e features a built-in run-time and capacity indicator.

The 14.8V 6.5Ah, 96 watt-hour pack is designed for broadcast ENG and professional video production. It incorporates high-capacity, long-life, premium quality Li-Ion cells, and is available in V-Mount and PAGlok models.

PAG is one of the broadcast industry's longest established providers of innovative and high-quality camera power and lighting systems.
